

MICROBOOK

The latest (and smallest) in MOTU's lineup of studio grade audio interfaces is the MicroBook, and like it's name implies.. it's tiny! Don't be fooled by it's diminutive stature - this tiny box is all you need to turn your Mac or Windows computer into a professional recording system with 4 input channels (including Mic, Guitar and balanced stereo line inputs), along with 2 output channels (offering 8 physical outputs in various formats including digital).

At first glance you would be forgiven for thinking this pocket sized gem lacks a top class mic input, but the space saving TRS mic input socket on the front panel, combined with the included XLR converter allows the connection of your best microphones to a studio grade mic preamp, which delivers neutral coloration and pristine sound, along with a 20 dB pad and 48V phantom power for condenser mics. All inputs feature digitally controlled analog trim, offering superb audio quality and ultra precise control. Balanced line inputs and outputs offer protection from external interference, RF noise, and AC hum, making the MicroBook ideal for laptop use.

MicroBook includes CueMixFX software (for PC and Mac), providing onscreen control over MicroBook's DSP mixing, effects and audio analysis tools. The bundled AudioDesk software (for Mac only) is a powerful workstation for recording, editing and mastering which really makes MicroBook an out of the box recording solution. Above all, this mighty audio interface literally fits in your pocket! MOTU have delivered once again! For full details and specs visit: majormusic.com.au/motu

DropTune & CAPO

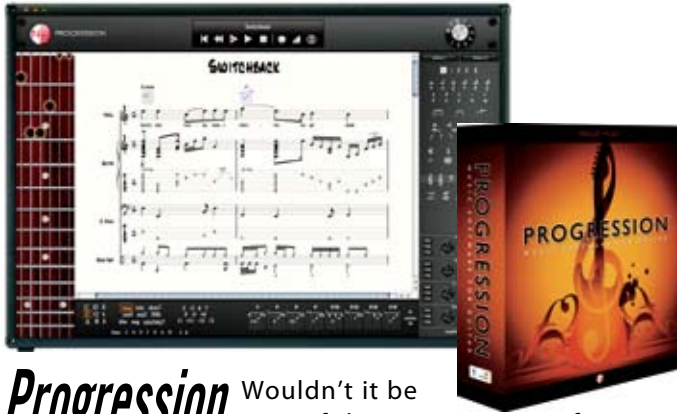

Morpheus have unleashed a new polyphonic pitch transposition pedal to complement the already successful DropTune. CAPO, in contrast to its sibling DropTune, is an UP-tuning processor that preserves intonation and tone while allowing you to transpose your instrument anywhere from a 1/2-step to 3 1/2-steps above its original tuning, also offering a full octave and an octaver/12-string effect. The effect "toggle" switch allows for some very creative use of this processor, instantly switching between clean signal and transposed signal. With a huge number of major artists already using these pedals, they are quickly revolutionising the way guitarists approach drop tuning and transposing. Check out Marc Cooper demonstrating these pedals on our YouTube channel: youtube.com/MajorMusicWholesale. For More info on DropTune and CAPO hit our website at majormusic.com.au/morpheus

ALLEN & HEATH XONE:22

Allen & Heath's Xone:22 sets a new standard on features and quality for 2 channel entry-level DJ mixers . Xone's renowned audio fidelity combines with full cut EQs, high spec faders, and Xone's legendary VCF filter, bringing the outstanding quality and performance Xone is famous for to everybody. Built without compromise the Xone:22 has tons of pristine headroom and carries features often neglected on entry-level mixers such as a dedicated booth output, separate record output, accurate metering, FX loop, and 2 band EQ on the microphone input. Whether you're just starting out, or looking for a simpler option for your setup, the Xone:22 is without a doubt the best choice out there. More info on Xone mixers can be found at: majormusic.com.au/xone

Progression Wouldn't it be great if there was music software that worked the way a guitarist thinks! Wow.. Progression by Notion Music does just that.. AND more: Use an interactive fretboard to input chords or choose from the chord library; Choose from over 70 drums patterns that are ready to jam with; Work in guitar tab or traditional music notation, whichever you prefer; Create instrument parts using high quality built in virtual instrument such as bass, drums, keyboards and guitar. Add to that the included guitar and bass amp simulations and effects plug-ins and you have a guitar music creation package that revolutionises music software for guitarists. Guitarists.. this is the program you've always wanted! Use it to compose music, jam with or teach with, Progression is MADE for guitar! Check out Progression on our on YouTube channel: youtube.com/MajorMusicWholesale or read more about Progression and other Notion Music products at majormusic.com.au/notion

step guided walkthrough format. The boxed version even includes the audio cables to connect your hi-fi gear to most standard computer soundcards. From recording or loading your original music or audio all the way through to splitting an LP into individual tracks and exporting the cleaned up result ready to burn to CD or even import directly to your iTunes library. Head to majormusic.com.au/bias and watch the video to see how easy it really is.

PM0.4n Monitors **Fostex**

Looking for some lively colour in your mix? Perhaps the surround system clashes with your sofa. Or maybe you're just bored with black! Shiny black, matt black, charcoal, pitch black. So many variations of black to choose from when it comes to monitor speakers! Well.. thankfully that trend is changing. Fostex's PM series now includes the expanded and updated PM0.4n range of compact monitor speakers. These babies now come in five lively and attractive colours: Black (of course), White, Red, Yellow and Violet. The new colour options are very cool for studio and home theater use and will breathe extra life into installed sound systems for retail, clubs, restaurants, and multimedia art installations. Importantly the PM0.4n includes threaded mount points for mounting brackets such as K&M model 24185 allowing easy installation, and compatibility with some home theater stands. Looks aren't everything however, and the PM0.4n are sonically excellent. Taking full advantage of Fostex's pedigree in speaker component manufacturing, the exclusively designed drivers deliver outstanding sound for such a small speaker, driven by a high efficiency 2x18W bi-amplifier in each speaker for superb audio transparency and clarity. Finished off with the PM series trademark glossy front baffle, the look great and sound awesome! Point your web browser at majormusic.com.au/fostex for more detail on these and the rest of the PM range of monitors.

SoundSaver

It sounds like some kind of comic book superhero devoted to the rescue of poorly recorded, badly damaged or just generally old and crusty audio! Well.. that's pretty close to the mark! BIAS Inc, the people who gave us Peak, SoundSoap, and Master Perfection Suite have recently launched this superb software solution for saving your sound! Designed to be simple to use, even for people who have never used audio editing software (like your parents perhaps?) SoundSaver offers powerful audio restoration and cleaning features in a simple step by
