

Aural·Xpanders™

The Toolkit for Sonic Sculpting.

In the art of audio capture, the recording engineer must contend with and balance many sonic issues (*external noise bleed, structure-borne resonance, off-axis colorations*) in order to arrive at sounds that are truly sonically robust.

Enter Aural·Xpanders™ by Auralex® Acoustics!

Aural·Xpanders give the recording engineer a high degree of control during the recording stage by providing the capability to filter undesirable external overtones before the sound ever reaches the signal path.

Perfect for recording engineers, drummers, broadcast talent or in any recording environment!

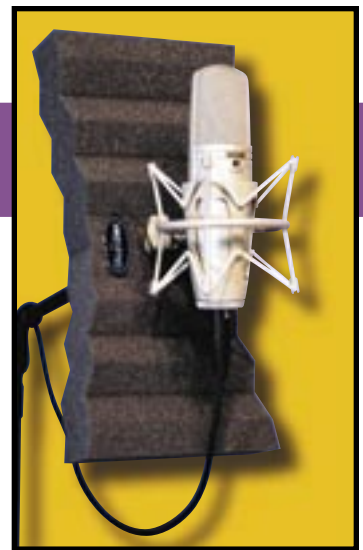

Each Aural·Xpander™ Toolkit comes complete with:

- (1) 14" Xpander™ ★ (2) 8" Tri-Xpanders™ ★ (4) 6" Trap-Xpanders™
and (6) PlatFeet™ Structural Resonance Interrupters
