

TruTraps™ Genesis™

Broadband Acoustical Control Kit

Shown with Q'Fusors™ mounted directly to the center TruTrap™ panel

The 'Off-the-Wall' Broadband Solution!

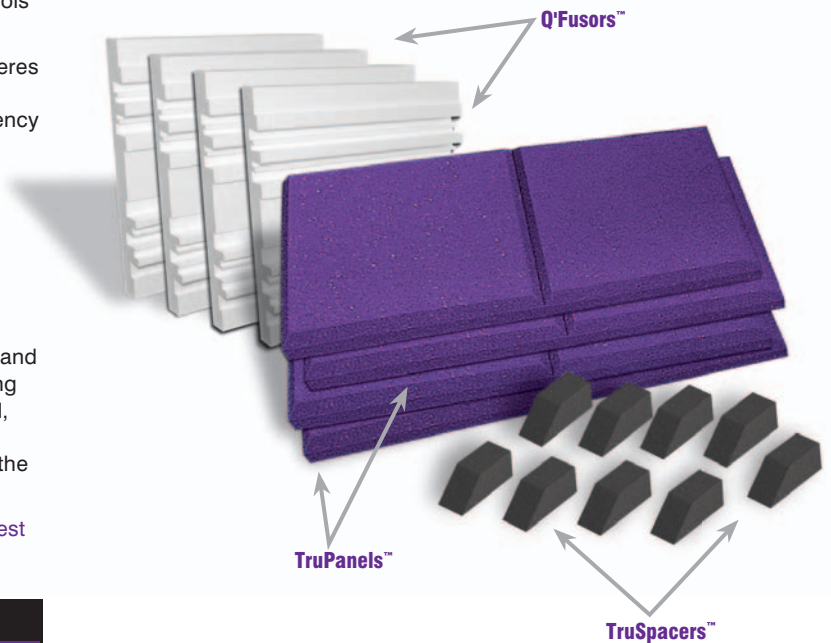

TruTraps Genesis System is a hybrid product solution that combines broadband absorption with quadratic diffusion to give you all the tools you need to accurately treat the sound in your room.

Genesis consists of four 3" **TruPanels** and four **Q'Fusors**, and adheres to the principle of utilizing an air gap behind a passive absorber to provide significant broadband absorption and increased low frequency control. Utilizing the 3" **TruSpacers** provides a 50% increase in absorption at 125Hz (.4 to .62 NRC), and even more when the **TruPanels** are placed diagonally in corners.

Mount the **Q'Fusors** to the front of the **TruTraps** for a combined coverage of 32 ft², or mount the **Q'Fusors** directly on the wall for an additional 14 ft² of coverage. The **Q'Fusors** expand the sweet spot while the **TruPanels** continue to trap low to mid frequencies.

Using one or more **Genesis Systems** provides a low profile broadband solution that allows great functional and design alternatives, creating a professional look for your room. Everything you need is provided, including the **TruSpacers** and **TubeTak Pro** adhesive, making the **TruTraps** an easy, turnkey answer for great acoustical control; and the best value of any "off-the-wall" alternative anywhere.

Please see Auralex.com for sizing recommendations, complete test data, and comparisons to other "off-the-wall" products!

TruTraps™ Genesis™ Broadband Absorption System		
System Contents	Quantity	Coverage
